Software

- KVM
- Scale Computing HyperCore Software (HC3)

Services

- Lenovo Remote Technical Support
- Lenovo YourDrive YourData
- Scale Computing ScaleCare Remote Installation Services

Ampner Oy provides products and services for connecting renewable energy sources to the electricity grid, whatever the source: water, wind, solar, or biomass. Launching innovative new products and planning to expand internationally, Ampner looked for scalable IT infrastructure that could keep up with its growth. Working with HardCoreIT, Ampner implemented a hyperconverged infrastructure based on the ON DEMAND Lenovo and Scale Computing HC3 solution—enabling seamless scalability, slashing IT admin, and increasing the availability and performance of critical business systems.

“The transition from fossil fuels to renewable energy is gathering pace, and we are building up our business to meet demand. Our scalable Lenovo and Scale Computing HC3 hyperconverged infrastructure will grow with us as we expand operations and enter new markets.”
