## Services

- Lenovo Deployment Services - HX Series Nutanix
- Lenovo Design Services
- Lenovo On-site Services – Deployment
- Lenovo Post Warranty Services
- Lenovo Proof of Concept Lab
- Lenovo Training Services

One of China's largest apparel export companies, Dishang Group has 20,000 employees and serves hundreds of world-renowned fashion brands. Operating in nearly 100 countries and regions around the world, the company has data centers in China and Southeast Asia, all kitted out with traditional IT infrastructure based on Lenovo technology. These data centers, located in three different regions, run Dishang Group's global business systems. To ensure high availability of data and business continuity, the group planned to refresh the three data centers with an active-active, distributed architecture. Starting with the data center in Weihai, China, Dishang Group deployed five Lenovo ThinkAgile HX5520 hyperconverged appliances running Nutanix Enterprise Cloud to replace its existing virtualized environment. With the new hyperconverged infrastructure (HCI) platform, Dishang Group benefits from 24/7 availability for key business systems, including its enterprise resource planning, enterprise management system, and warehouse management system applications.

“

“The Lenovo and Nutanix technologies are highly integrated and deeply optimized, and we benefit from exceptional performance and usability with the Lenovo ThinkAgile HX solution.”

Meng Zhijian,  
Deputy Manager of Information Center, Dishang  
Group Co. Ltd.
