Services

- Lenovo Assessment Services
- Lenovo Design Services
- Lenovo Deployment Services – HX Series Nutanix
- Lenovo Post Warranty Services

Huajin Securities invests continuously in leading-edge big data and robotic process automation (RPA) tools to improve service quality and workflow efficiency. As digital workloads increased, the company looked to scale its infrastructure, deploying Lenovo ThinkAgile HX 5000 Series appliances at three key locations. Using the Lenovo hyperconverged infrastructure (HCI) platform, Huajin Securities runs 300 virtual machines that support 70 applications—from RPA and risk management tools to investment management and core transaction systems. With the Lenovo ThinkAgile HX Series solution, the company has improved business continuity, simplified infrastructure management, and increased agility, enabling rapid deployment of server and storage resources. Over five years, Huajin Securities expects that the Lenovo platform will contribute to operational cost savings of \$2.1 million.

“The Lenovo ThinkAgile HX Series hyperconverged infrastructure supports our most critical applications, such as our non-real-time transaction system and middle and back-end management system, saving tens of millions of yuan in hardware procurement costs, and reducing operating costs by more than 6 million yuan a year.”

Gu Junging,
Manager of Information Technology,
