Bringing traditional treatments to more patients

Jinjiang Hospital of Traditional Chinese Medicine (JHTCM)

JHTCM is one of only a few county-level hospitals in China dedicated to traditional medicine, and part of the wider Jinjiang Municipal Medical Service Center. JHTCM receives prescription requests from across the region and arranges for treatments to be delivered to patients with an integrated medical information system, running on a hyperconverged infrastructure based on Lenovo ThinkAgile VX Series and Lenovo SDI Management Platform—reducing the application launch speed from 4 days to 1.5 days and cutting operating costs by 30%. With Lenovo, JHTCM benefits from high availability, simplified IT management, and seamless scalability, ensuring that it can deliver traditional therapies to more patients across the region.

Hardware

Lenovo ThinkAgile VX5530

Software

Lenovo Software Defined Infrastructure Management Platform
VMware vCenter
VMware vSAN
VMware vSphere

Services

Lenovo On-site Services – Deployment

“Our two main goals for the new infrastructure were easy scalability and unified management. Lenovo ThinkAgile VX Series delivers on both fronts, helping us to keep pace with patient growth.”

Mr. Su

Information Manager, Jinjiang Hospital of Traditional Chinese Medicine
