

Using technology to protect children’s rights

Save the Children

To help support its operations in Spain, global charity Save the Children partnered with Lenovo to refresh its end-user devices. By using Lenovo Asset Recovery Services and Lenovo CO₂ Offset Services to enhance sustainability and contain costs, the organization has equipped its teams with Lenovo ThinkPad E16 devices.

Customer Problem

In Spain, Save the Children uses digital technology to support its frontline services and help keep minors safe—but its existing laptop devices had reached end of life.

Lenovo Solution

Working with Lenovo, the charity has refreshed more than 200 laptops with robust, high-performance Lenovo ThinkPad E16 devices, backed by Lenovo Premier Support Plus.

Business Impact

Modern Lenovo devices empower the charity to carry out its mission, while Lenovo Asset Recovery Services and Lenovo CO₂ Offset Services help offset the costs of the new hardware and minimize e-waste.

“We use digital tools to help us ensure every child’s right to survival, learning and protection. With Lenovo Premier Support Plus, we can give our teams always-on access to the digital resources they need.”
