

Combining tradition with the latest tech

Nanjing Hospital of Traditional Chinese Medicine

Founded in 1965, Nanjing Hospital of Traditional Chinese Medicine (NHTCM) is one of the earliest established hospitals of traditional medicine in China. Today, it is a large, 3A-grade hospital with 1,575 beds and 1,900 employees. As part of its wider modernization strategy, NHTCM upgraded its data center by replacing its three-tier architecture with a hyperconverged infrastructure (HCI) based on Lenovo ThinkAgile HX Series. This gives the hospital the scalability and flexibility required to launch innovative new web-based services and business systems, ensuring a better experience for both patients and staff.
