

Keeping vital health services on track

Nanjing Qinhuai District Health Committee

Nanjing Qinhuai District Health Committee (NQDHC) is responsible for healthcare provision in the region, managing 12 community health centers and secondary-level hospitals. By replacing its complex, outdated three-tier data center architecture with a hyperconverged infrastructure (HCI) based on Lenovo ThinkAgile VX Series, NQDCH successfully simplified and streamlined IT operations, enabling more efficient resource utilization. Configured as an active-active stretch cluster, the HCI solution offers high availability and agility for business continuity and disaster recovery, helping NQDCH deliver critical services to local healthcare providers.
